

REPORT

TASK 1

For this task, I used Canva to design my digital literacy infographic because it is easy to use and provides many templates and icons. My design focuses on explaining the concept of digital literacy in a simple and visually attractive way for students. The infographic includes key topics such as what digital literacy means, useful digital tools for students, safe internet practices, professional online presence, and email etiquette.

I organized the content into separate sections using icons and short bullet points so that it is easy to understand at a glance. I used a clean color theme and simple layout to make the design look professional and engaging. The aim of my design is to help students become more aware of how to use digital tools effectively and safely in their academic and personal lives.

One interesting part of this task was selecting the right icons and layout to make the information visually appealing. However, I found it slightly difficult to keep the content brief while still covering all important points.

TASK 2

For this task, I created and updated my profiles on GitHub and LinkedIn. GitHub is mainly used to store and manage coding projects, and I created a profile README to introduce myself and highlight my learning goals. LinkedIn is a professional networking platform where I added my educational details to build my professional identity. Each platform serves a different purpose. GitHub will help me showcase my coding projects and track my progress. LinkedIn will help me connect with professionals, explore internships, and build my career network. Over the next four years, I plan to regularly update my GitHub with projects, stay active on LinkedIn by sharing achievements and learning updates. This will help me build a strong digital presence and improve my skills for future career opportunities.

TASK 3

For this task, I used HackerRank and Google Forms to explore coding practice and collaboration tools. On HackerRank, I created an account and completed a beginner-level problem called “Solve Me First.” This helped me understand the platform interface and basic problem-solving approach in programming.

For collaboration, I created a Digital Literacy Awareness Quiz using Google Forms. The form includes five questions covering important topics such as digital literacy, safe internet practices, useful tools, and email etiquette. I also explored the response feature, where answers are automatically collected and displayed in a Google Sheet, making data analysis easy.

These platforms are very useful academically. HackerRank will help me improve my coding and problem-solving skills through regular practice. Google Forms will help me conduct surveys, quizzes, and collect data efficiently for projects and research work. Over time, I plan to continue solving coding challenges and use Google Workspace tools for collaboration and academic tasks, which will enhance my technical and analytical skills.

TASK 4

In this task, I learned how to write professional emails and understood the importance of proper email etiquette. I also created a simple guideline to help my peers communicate effectively in academic and professional environments. Email etiquette includes using a clear subject line, a respectful greeting, a well-structured message, and a proper sign-off. It is important to maintain a polite tone and avoid informal language or unnecessary content.

By following these rules, students can create a positive impression on professors, employers, and professionals. This

skill is essential for academic communication, internship applications, and future workplace interactions. As a Digital Ambassador, I believe spreading awareness about email etiquette will help students improve their communication skills and maintain professionalism in digital communication.

TASK 5

While researching cybercrime, I was most surprised by how simple tricks can lead to serious financial loss. Many scams do not require advanced hacking skills; instead, they rely on manipulating people into making mistakes, such as sharing OTPs or approving fake payment requests. This shows that lack of awareness is a major factor in cybercrime.

One habit I will personally change is being more cautious while handling online payments and messages from unknown sources. I will always verify before clicking links or approving any request. I will also educate my friends and family about common scams, especially UPI fraud, so they can stay safe. This task helped me understand that cybersecurity is not only about technology but also about responsible user behavior.
